

**SYSTEM AND METHOD FOR PROVIDING NETWORK
ADDRESS INFORMATION IN A SERVER SYSTEM**

Abstract of the Disclosure

5 A cPCI server system includes a plurality of host processor cards. A management
card is coupled to the plurality of host processor cards via at least one bus. The
management card includes at least one user interface for receiving network address
information from a user. The management card is configured to send received network
address information to the plurality of host processor cards via the at least one bus,
10 thereby configuring the host processor cards for management LAN communications.
